

PROBIO

A broad spectrum biocide for the surface treatment of water.

PROBIO is a broad spectrum biocide (toxic chemical product for micro-organisms). It destroys harmful organisms (bacteria, fungi, yeast, algae, mould...) on paint installations with a water curtain, as well as in industrial cooling water systems, surface treatment baths, etc. This product can therefore be used to disinfect water.

PROBIO is a very efficient biocide used to treat almost all micro-organisms, even those found in small concentrations.

PROBIO complies with the European Directive 98/8/CE concerning the marketing of biocide products. It is therefore an efficient product with no unacceptable risks.

PROBIO must not be used in drinking water systems (for human consumption).

Advantages

- Reduces bio-fouling
- Prevents unpleasant odours
- Prevents the propagation of micro-organisms
- Wide range of applications: Efficient on almost all micro-organisms

Dosage

The PROBIO dosage depends on several factors:

- Type and quality of micro-organisms.
- Volume of bath or circuit.
- Bath change frequency.
- Quantity of pollution.

Shock treatment	1 % of the water volume
Maintenance treatment	0,2 to 0,4 % of the water volume

Characteristics

PHYSICAL STATE	Transparent liquid
COLOUR	Yellowish
ODOUR	Slightly aromatic
BOILING TEMPERATURE	100°C
PH	6-6,5
SOLUBILITY	Completely water soluble

Wear protective gloves and safety glasses.
